

Break Away

รายละเอียด

The Husky Safety Dry Break Coupling is designed so that in the situation that a vehicle drives off with the dispensing nozzle still in the vehicle filler, it breaks and seals off both ends of the hose. These emergency breakaway couplings are re-usable, and can, therefore, help to prevent damage and fuel spillages again and again.

Shock absorbing spring to reduce nuisance breaks.

Breaks away at 200lbs force to limit backlash.

Aluminium construction with stainless steel spring

Viton Seals.

Suitable for use with diesel and bio-diesel up to B30

Feel free to call or email if you require any further information
